8 Programming the Image Sensor

The data sheet for the IMX297LQR-C image sensor is not publicly available.

8.1 Input Clock

The CLK pin has to be connected to a clock source. The following table lists the ranges of clock frequencies that are supported by the image sensor:

| Minimum | Typical | Maximum | Unit |
|---------|---------|---------|------|
| 35.64 | 37.125 | 37.867 | MHz |
| 51.84 | 54 | 55.08 | MHz |
| 71.28 | 74.25 | 75.735 | MHz |

The driver provided by The Imaging Source assumes a CLK frequency of **37 MHz**. For quick integration with existing software, using this frequency is recommended.

8.2 Power-up Sequence

| Delay | Action |
|-------|----------------------------|
| - | Set RESET to Hi-Z |
| - | Set CAM_PWR to Hi-Z |
| - | Supply 5V to 5V_VDD |
| - | Supply sensor clock to CLK |
| 1 µs | Set CAM_PWR to high |
| 20 μs | Set RESET to high |
| 11 ms | Write sensor registers |

8.3 Further Assistance

For more detailed information, register settings and assistance integrating the sensor board into your product, please contact The Imaging Source support.

Trigger Control FPGA

9 Trigger Control FPGA

In order to handle complex trigger/strobe functions of the image sensor, a FPGA is present on sensor board revision 2.00 and above.

A reference driver implementation is available upon request.
